

Ester Base Stocks & Additives for Industrial Lubricants

Driving Innovation for a Sustainable Tomorrow

Founded in 1840, Emery Oleochemicals has a rich heritage developing and manufacturing natural-based chemicals made predominantly from renewable oils and fats. Emery Oleochemicals' philosophy of 'Creating Value' for our customers is evident through our wide-ranging product portfolio that caters to the diverse and unique needs of an evolving marketplace.

Today, over 175 years later, Emery Oleochemicals is known for world-leading, in-depth technical expertise and the production of high-quality specialty chemicals. Through our global operations that span North America, Europe and Asia Pacific, we provide our customers with best-in-class sustainable products and solutions.

Advancing Global Sustainability through over 60 Years of Innovation: DEHYLUB® ESTERS

Emery Oleochemicals has advanced global sustainability through over 60 years of innovation in esters technology. Through our focus on research and technological advancements, we are poised to provide you with differentiated, innovative and customizable solutions. Supported by our regional Technical Development Centers and dedicated Product and Application Development labs in the USA and in Germany, our Bio-Lubricants business platform can also support both exclusive and joint solutions development efforts with our customers to meet your specific requirements.

Serving a multitude of industries for many decades, Emery's ester base stocks and additives are used in oilfield drilling fluids and marine fluids that require environmentally acceptable lubricants (EALs). Our breadth of experience enables us to deliver high-performance products for a variety of applications including:

- Hydraulic Fluids
- Rolling Oils
- Automotive Applications
- Oilfield Lubricants
- Metalworking Fluids
- Industrial Lubricants
- Greases
